Lab 2 - Responsive Navbar and Grid Drill

What I built

For this lab I made a small page with a responsive navbar and a product grid. The navbar has the logo on the left, the links in the center and the cart on the right. Below 768px it collapses into a hamburger menu.

The product grid shows 4 columns on desktop, 2 columns on tablet and 1 column on phone. I used Bootstrap 5 for the navbar and its collapse button, and my own CSS Grid with media queries for the grid. The products use placeholder names, prices and photos.

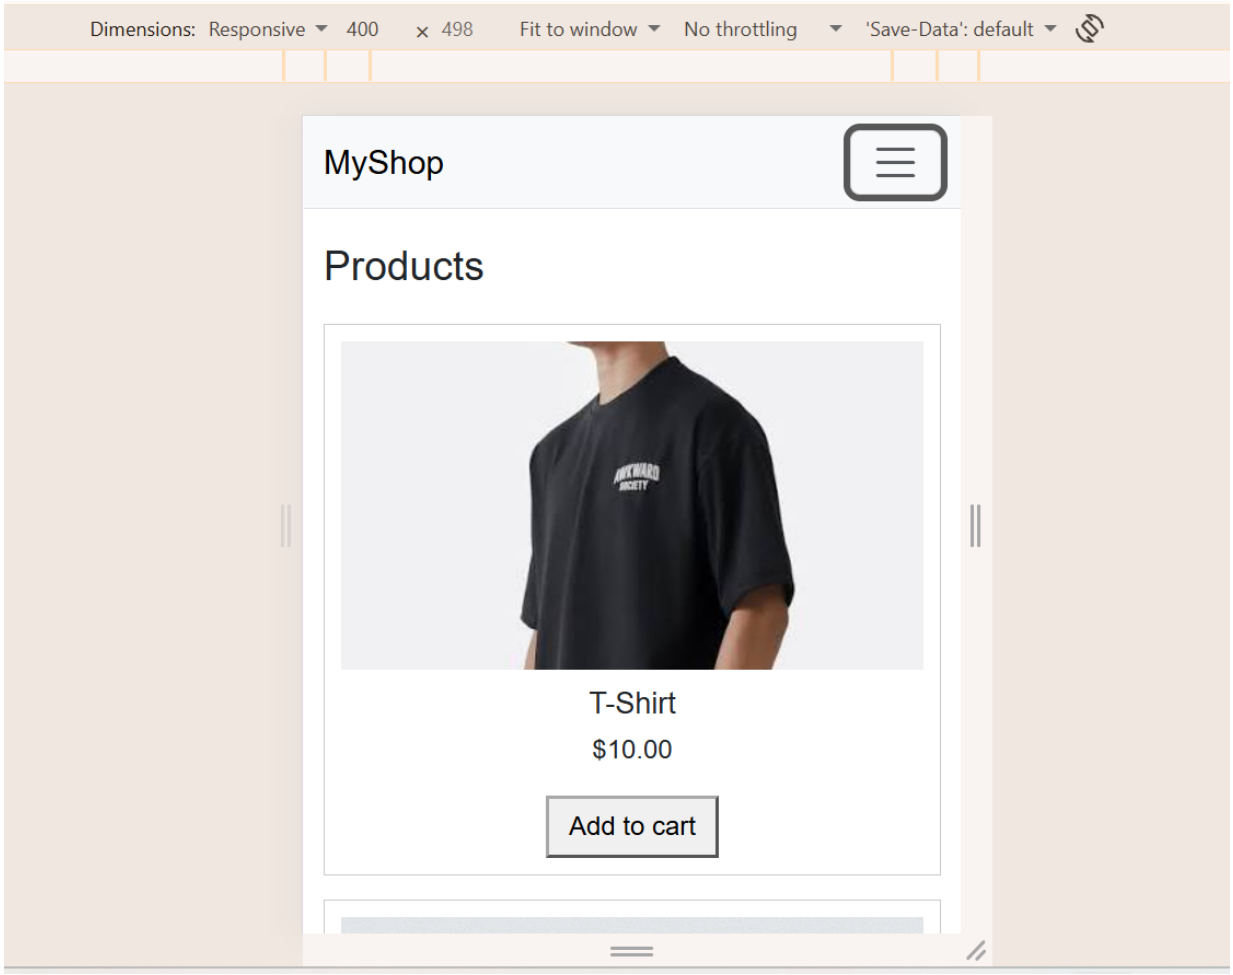

Files in lab-2/

index.html, style.css and the images/ folder with the product pictures.

Breakpoints used

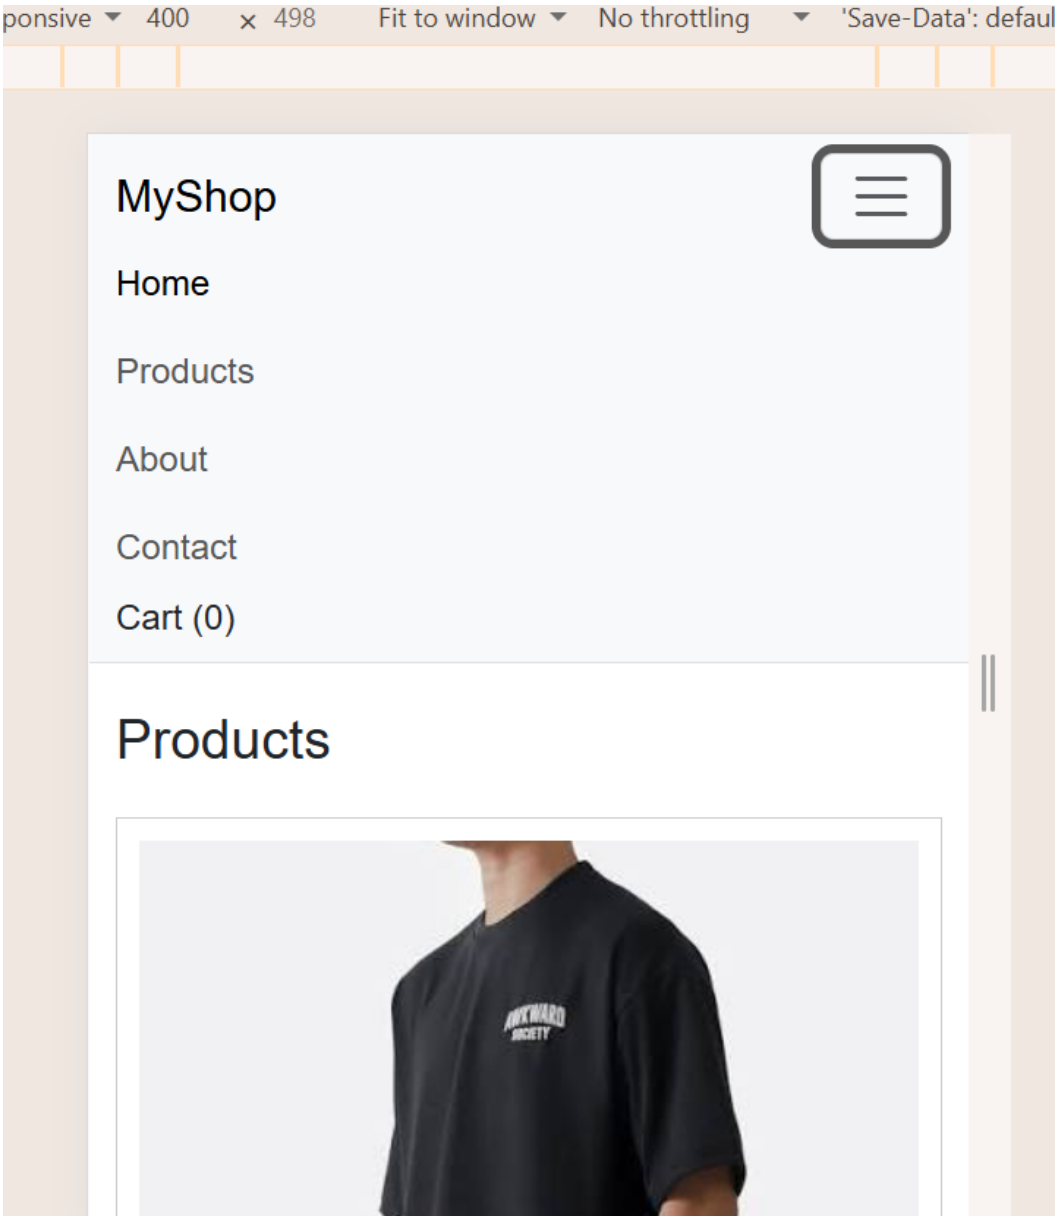

Under 768px: 1 column and hamburger menu.
768px and up: 2 columns and full navbar.
992px and up: 4 columns.

Screenshot 1: Phone view (400px wide), menu closed

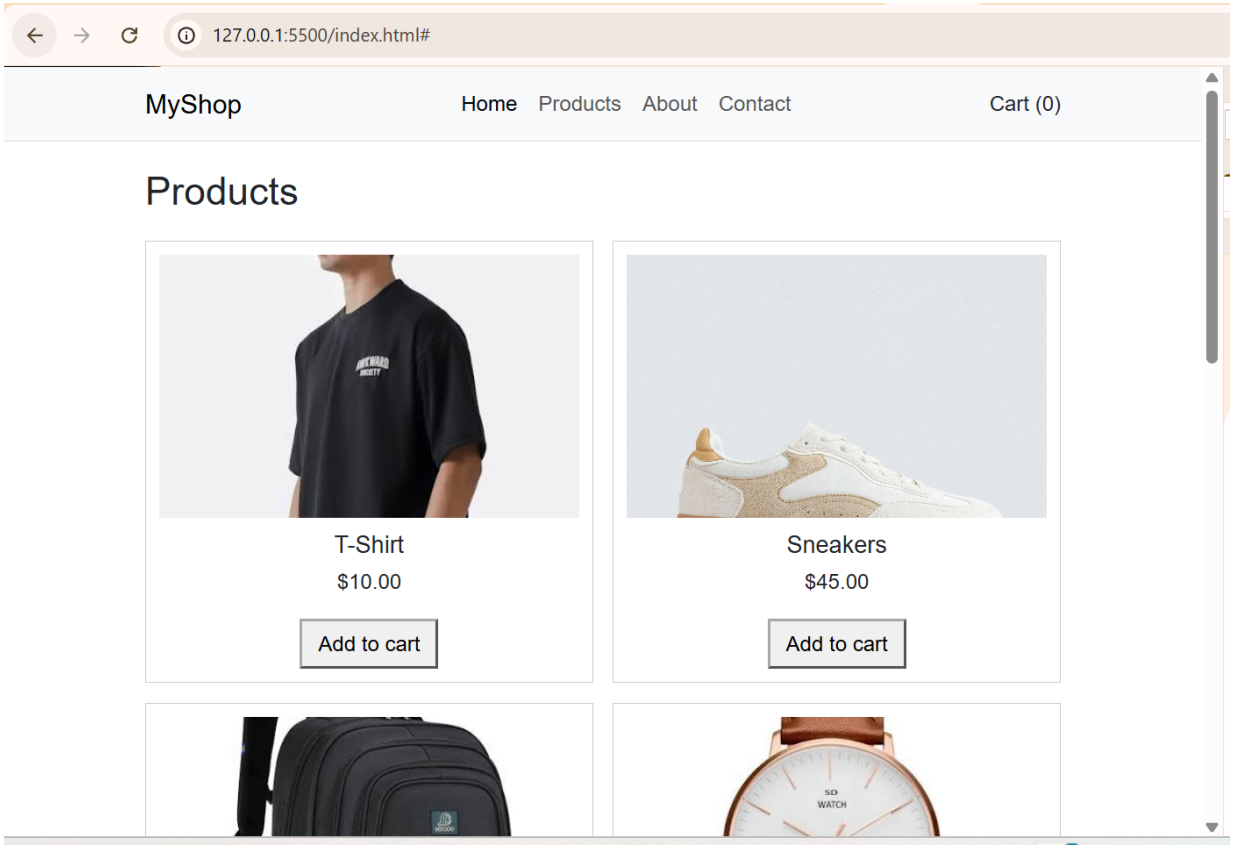

Below 768px the navbar links collapse and only the logo and the hamburger button are shown. The product grid is a single column.

Screenshot 2: Phone view (400px wide), menu open

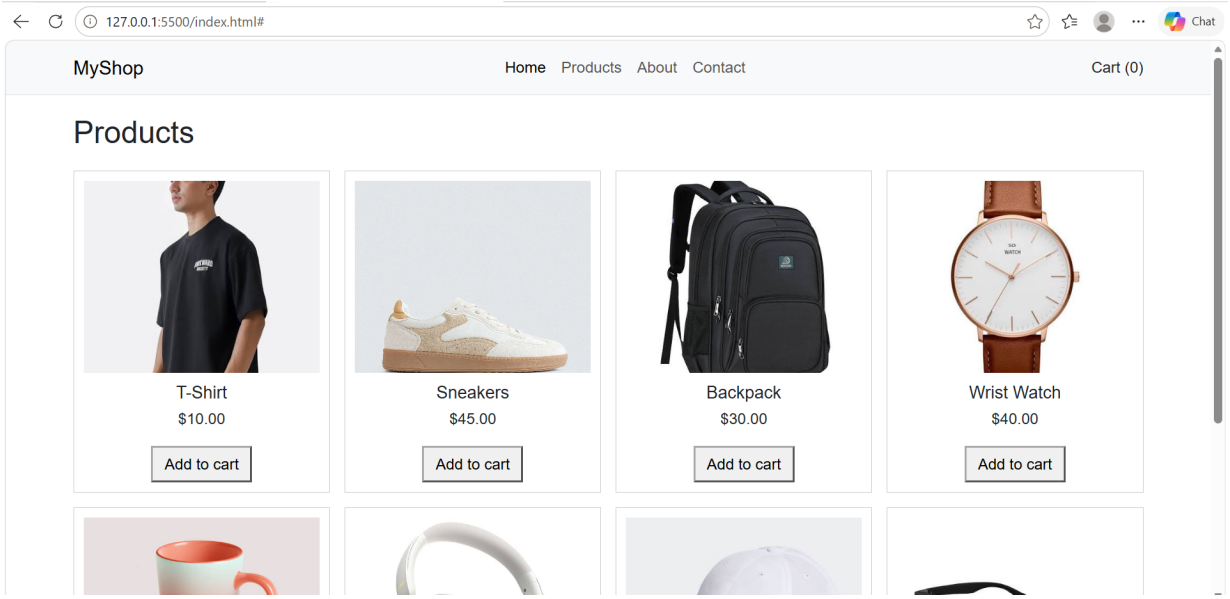

After tapping the hamburger button the links (Home, Products, About, Contact) and the cart link open in a vertical list.

Screenshot 3: Tablet view

At tablet width the full navbar is back (logo left, links in the center, cart right) and the product grid shows 2 columns.

Screenshot 4: Desktop view

At desktop width the navbar is the same and the product grid shows 4 columns.
